01 / 09 BRAND FOUNDATION

The brand, at a glance

01

Emerald Grey is a healthy home consultancy, built by two people who have lived the problem it solves. We work with homeowners who care deeply about the rooms they live in, particularly the rooms they sleep in, assessing the invisible factors that shape how they feel and guiding them toward homes that genuinely restore them.

We combine building biology science, an architect's understanding of how homes function, and a feeling for natural materials, light and calm. The bedroom is our entry point, because it is the room where the invisible matters most and where small, beautiful changes are felt first.

Our story

Emerald Grey began in a house that was slowly making us ill. For ten years we lived in a home in Oxford where mould grew season after season and was repeatedly dismissed as condensation. The word made it sound harmless. It was not.

In those years, both of us struggled with health issues we could not quite name. Obesity, anxiety, fatigue that never lifted. Alfie, who was born with a heart condition, found his allergies growing and eczema flaring. Iza, already sensitive to grasses, pollens and animals, began to have persistent migraines and became acutely aware of strong lights, strong smells, flicker and the electromagnetic activity of the rooms around her. We were doing everything we were told to do, and nothing was working. The issue, it turned out, was not us. It was the house.

Leaving that home was the beginning of a slow recovery, and of a question we could not put down. How many other people were unknowingly being shaped by the homes they lived in, and how much of what they were told to fix in themselves was in fact the environment around them?

Emerald Grey is our answer. Iza brings a decade of experience as an architect, with a deep feeling for space, light, proportion and material. Alfie brings the analytical mind of an audio engineer and data analyst, specialising in electromagnetic field testing, with a rigour honed by years of measuring what others miss. We built the practice we wish had existed for us: one that would have arrived in our Oxford home, taken us seriously, and given us a thoughtful, beautiful path forward.

Mission and vision

> *“To help you feel like yourself again, in the rooms you love most.”*

We exist to translate the hidden layers of the built environment into clear, grounded guidance. Our vision is a world in which healthy homes are an instinctive standard rather than a luxury, and in which the conversation about wellbeing moves upstream from supplements and routines to the walls, the air and the light around us as we rest.

What we value

- **Grounded authority.** We speak plainly and calmly, and our confidence comes from measurement, study and lived experience, not volume.
- **Reassurance before risk.** We never use fear to motivate. Every concern is paired with a way forward.
- **Natural beauty, always.** A home that protects health but feels clinical has failed. Aesthetics and wellbeing belong together.
- **Thoughtful moments.** A home assessment is a careful reading of how someone actually lives, not a checklist.
- **Real connection.** We work with a small number of clients, deeply, and our relationships outlast the final report.
- **Rigour behind every recommendation.** We measure before we advise, cross-referenced against SBM-2024 and other established standards.

02 / 09 POSITIONING

Where we sit, and why we are different

02

Positioning statement

> *"A healthy home consultancy focused specifically on the bedroom and the way you sleep, for homeowners who value real connection, beautiful individual pieces, and a calm, thoughtful approach to their home, delivered with joy and humour."*

What makes us different

- **We focus on the bedroom, on purpose.** It is where the invisible has the greatest effect, and where we almost always see the first real change.
- **We bring architecture and building biology together,** so recommendations fit the house and the people.
- **We work with a small, considered roster,** so every home gets our full attention.

What we are not

We are not an interior design practice. Where it supports your health, we advise on the specification of paints, finishes and materials, but we do not design furniture schemes or sell products. We do not sell supplements, sleep trackers or wellness gadgets, and we are not a mitigation-first EMF consultancy that arrives with shielding paint before we have understood how you live.

The one idea that organises everything

> The wellness industry tells our clients that poor sleep and fatigue are personal failings. We add the dimension it has skipped past: for many people the overlooked variable is not behaviour but environment. The reader should finish any piece thinking: *I recognise that. I did not know why. I want to understand more.*

How we differ from neighbouring services

Against EMF testers, building biologists and interior designers, we combine measurement with architecture and design, focus on sleep and the bedroom, and never lead with alarm. Against wellness influencers, sleep coaches and feng shui consultants, we are practitioners rather than personalities, and we address the environment rather than behaviour. Feng shui is a background influence, not a service.

03 / 09 AUDIENCE

The woman we are here to help

03

Our client is typically a woman in her fifties, with many in the wider range of her forties to seventies, a homeowner, who experiences her home as a foundational part of who she is. She is educated and discerning, and has the means and the wish to invest in her environment. She already cares about what she eats, breathes and surrounds herself with. She is not waiting to be convinced that her home matters. She is looking for someone she can trust to help her get it right.

> *Emma, 51. Lives in a renovated stone cottage in the Cotswolds with her husband and two children. Works three days a week in a senior role she finds meaningful but draining. Has a persistent tiredness she has not got to the bottom of, sleeps poorly in the second half of the night, and has noticed she feels lighter in certain hotels or friends' homes. She cannot place why.*

What she values

- **Calm over optimisation.** She is tired of being told to do more.
- **Natural, individual beauty.** Natural materials, handmade objects and warm neutrals. She would rather wait for one piece from a maker she knows than buy ten mass-produced ones.
- **Real connection.** She responds to practitioners who speak like an intelligent friend, take her seriously and stay in touch.
- **Science she can follow.** She is not intimidated by data, and she does not want jargon.
- **Family wellbeing.** Decisions about her home are rarely only about her.

What moves her

She is moved by a wish for restoration: not dramatic transformation, but being fully herself again, rested and at ease in her own rooms. She is moved by real stories more than statistics. When she reads that we spent ten years in a mouldy home dismissed as condensation, something relaxes in her, because she knows we will take her seriously. She does not wake up thinking *I need my electromagnetic fields tested.* She wakes up thinking *why am I still tired?* and *why do I keep waking up?* We start from her words.

Two women we meet often

The woman who has tried everything. She has done sleep hygiene, tried magnesium and melatonin, and owns blackout blinds and a sleep tracker that does not tell her why. She is not sceptical about solutions, she is hungry for one that works. For her, the bedroom environment may be the explanation for why nothing else has held, and she will remember who gave it to her.

The 3am waker. She falls asleep easily and wakes between 2am and 4am, with good sleep hygiene and a consistent bedtime. The first half of the night works and the second is broken. The building biology answer is genuinely useful: evening light, bathroom light at night, CO_2 build-up by 3am, thermal disruption. The depth belongs in the programme and the assessment.

Where she finds us

Instagram is the primary discovery channel, often through saves rather than likes. She also arrives by recommendation: from health practitioners, architects, the local community and events where she has met us in person. By the time she enquires, she has usually spent weeks following us.

Writing for her

Every word is written with this one woman in mind. Ask: does she need this, and does it meet her where she is? We validate her experience, give her genuine insight into what is happening, and leave her hopeful and confident that change is possible. People decide emotionally and justify logically, so emotion comes first, education follows, and the story comes before the science.

> *Four feelings every piece should leave her with*
>
> **Hopeful:** this might make the difference. **Curious:** I had not thought about it that way. **Excited:** I want to know more. **Confident:** I can do this.

Lead with the feeling, not the science. Frame our services as thoughtful care, not diagnosis or rescue. Avoid the language of hacks, optimisation, protocols and biohacking. She is not trying to optimise. She is trying to rest.

04 / 09 VOICE AND TONE

How we sound

04

> *"If the reader feels calmer, clearer and supported after reading, the voice has done its job."*

Calm, refined, reassuring and grounded. Scientifically informed but expressed in human language, with a real sense of joy and humour. We speak the way a knowledgeable friend would, one who happens to be deeply qualified, who leads with real experience rather than credentials, and who makes the invisible feel understandable without making it feel frightening.

Many brands have calm. Few have calm and delight. Our beliefs should read like things Iza finds genuinely fascinating and cannot help sharing, never like principles being recited. The emotional journey is **curiosity, then understanding, then relief**, never fear, then solution.

Seven voice principles

- **Lead with human experience.** Anchor every piece in real homes and real feelings before findings or data.
- **Reassure before risk.** An issue should first feel understandable and manageable. Only then do we explain why it matters.
- **Translate science into daily life.** Pair every technical point with what it feels like: sleep, focus, calm.
- **Pair insight with progress.** Every concern is followed by a practical next step. No reader leaves with a problem and no pathway.
- **Normalise, never diagnose.** Reassure people they are not alone and not at fault.
- **Sell the sleep, not the bed.** Lead with the symptoms she recognises and the outcome she wants, in her own words, then explain how our work gets her there. People connect emotionally first and justify with practical detail, so we need both.
- **Elevation, not sales.** A healthy home is an enhancement to daily life, not a correction of failure. Refinement and clarity do the work.

Language

We lean on short sentences, soft modals (may, can, often, tends to), British English, and words such as calm, thoughtful, natural, real, grounded, beautiful, considered, joyful, restorative, unhurried, measured and honest. For science: suggests, indicates, linked, associated with.

We handle with care: dangerous, urgent, toxic, critical, emergency, attack, fight, battle. These must be earned by context and paired with resolution. We avoid the language of optimisation (hack, biohack, protocol, stack, upgrade your system) and wellness clichés (glow up, your best self, healing era, game changer).

We never use: "quiet", "quietly" or "gently" (say what is actually happening instead), or abstract, poetic filler that could appear in any wellness brand's copy. If a line sounds written rather than lived, replace it with something specific from a real home. Also never: apparently, supposedly, allegedly; "proves" and "guarantees"; "you must"

in health contexts; the line “It is not you, it is your room” or any variation; em dashes.

How we talk about science

How we speak about science matters as much as what we say. We move from mechanism to research to application, never research first, and we match the strength of our language to the strength of the evidence.

- **Acknowledge scepticism upfront.** Name the doubt before the reader has to.
- **Explain the mechanism first.** The how comes before the why, because mechanism is credibility.
- **Use personal testing as a bridge.** “In my testing” is not proof, but it connects research to lived experience.
- **Qualify research precisely.** Use “research shows” for the strongest evidence, “suggests” for moderate, “explores” or “may” for emerging, and “I would err on the side of caution” where evidence is precautionary or observed only.
- **Name limitations.** Saying what we do not yet know builds more trust than oversimplifying.

Email and direct communications

Email is the fullest, warmest expression of our voice. Iza writes as if she is smiling: genuinely pleased to share something useful, unhurried, and writing to one person she cares about. **Write as Iza writing a letter to a friend.** If it reads like content, it needs rewriting.

- **Opening.** *Hi [first name],* then enter through the reader’s experience, a simple question or a warm observation, never through the topic.
- **The middle.** One main message. Our story comes early, because the Oxford house is far stronger than a general introduction, and the science explains what she has already felt.
- **The action.** Where relevant, a small *Try this tonight* step that is free or under about £15 and connected to the insight. Noticing is enough.
- **The sign-off.** *Best wishes, Iza*.

The voice is flowing and personal, never fragmented for effect and never a list. Subject lines are soft, curious or personal, like the opening of a letter. Science in email explains something the reader has already felt and never introduces a new concern.

Voice comparison

WE SOUND LIKE THIS	NOT LIKE THIS
Many modern homes hold more electromagnetic activity than people realise. It is rarely cause for alarm, but it is worth understanding.	Your home is probably flooded with dangerous EMF radiation damaging your health right now.
Many families notice the difference within the first few nights.	Our clients see a 47% improvement in sleep quality.

Before anything goes out, read it back. Is it reassuring rather than alerting, insightful rather than technical, warm rather than polished, human rather than clinical, confident rather than forceful? If any answer is no, rewrite it.

05 / 09 MESSAGING FRAMEWORK

What we say, and how we say it consistently

05

Tagline and descriptor

> *where home meets health*

Always lowercase, in Playfair Display italic or, for personal moments, Brittany Signature. Never all-caps, never with punctuation at the end.

Descriptor: A healthy home consultancy, focused on the bedroom and the way you sleep.

Elevator paragraph

Emerald Grey is a healthy home consultancy that helps people sleep better, feel calmer and feel like themselves again in the rooms they love most. We find and improve the hidden things in a home, its air, fields, light and materials, that steadily shape how restfully you sleep and how well you feel. We are Iza, an architect, and Alfie, an audio engineer and data analyst who specialises in EMF testing. We spent ten years in a home that was slowly making us ill, and the recovery changed how we see every house we walk into. Today we focus on the bedroom, and we work with a small roster of homeowners who want their home to support their health as naturally as it holds their family.

Four message pillars

All content, whether a caption, a report or a keynote, should ladder up to one of four pillars.

PILLAR	WHAT IT COVERS
The invisible home	Air, electromagnetic fields, light, materials, moisture and acoustics: teaching people to see what was always there.
The bedroom, specifically	Why the bedroom matters disproportionately, and what a healthy sleeping environment looks like.
Natural beauty	Natural materials, finishes and fabrics as the foundation of a healthy, beautiful home.
The measured approach	What we do, what we measure and why rigour matters. This builds authority without leaning on it.

Positioning hooks

Short-form angles for the top of a caption, a post or a page, designed to stop the reader and earn the next sentence.

- Your home has the power to restore you.
- Some homes restore you. Others wear you down.
- Your body registers what your eyes cannot.
- We lived in a home that was making us ill for ten years. It was dismissed as condensation.

Our ten beliefs

These are not slogans. They are the convictions that shape how we speak and what we choose to write about, and every piece of content, consultation and email should trace back to at least one of them.

BELIEF	WHAT IT MEANS
1. Homes communicate before they explain.	The best homes feel calm before you know why. A healthy home is not simply seen. It is felt.
2. The body notices first.	The body often detects a problem long before a meter confirms it. Good science investigates those observations rather than dismissing them.
3. Every home tells a story.	Every property carries a history of decisions, materials, repairs and unseen conditions. Most people see the symptoms. We look for the plot.
4. A home is an ecosystem, not a machine.	Change one variable without understanding the rest and the whole system responds. Insulation affects moisture, airtightness affects ventilation, new technology affects the electrical environment.
5. Nature is our gold standard.	Natural light, clean air, breathable materials, darkness at night and quiet are what our bodies evolved with, so the closer a home comes to them, the better it tends to support us. We reach for natural materials first and measure everything else against them.
6. The home is our third skin.	Our own skin is the first, our clothing the second and our home the third: the layer between us and the world that regulates warmth and moisture and holds us while we rest. It deserves the care we give to what we put on our bodies.
7. More efficient or newer is not always healthier.	Some of the most uncomfortable homes we see perform exactly as designed. Health is determined by how a building behaves, not its age.
8. You cannot understand what you have not measured.	People blame stress, hormones or bad luck for symptoms that may have an environmental component. Measurement creates clarity, not fear.
9. The cure for a sick home is rarely another device.	The healthiest homes are often the simplest. Health is often restored by removing what does not belong.
10. The bedroom is the most important room in the house.	You spend about a third of your life there, and it is where repair happens. A healthy home begins where recovery happens.

> *The central philosophy*
>
> *Healthy homes are not created by adding more. They are created by understanding what is already there.*

Leading thoughts: health as the asset a home protects

These ideas give our arguments their weight, and are the thread to return to whenever we explain why a home's health is worth measuring.

> *The core idea*
>
> *What if we started treating our health as one of the most valuable assets a building can protect?*
>
> Our home is usually the most expensive asset we will ever own. Our health is the most important asset we will ever have. A home is not only an investment to be maintained, it is the place that holds, or slowly erodes, the thing we value most.

How we define the value of a home. We spend a great deal of time on energy efficiency, embodied carbon, aesthetics and financial value, and we never argue against them. Yet how often do we measure whether a building genuinely supports the health and wellbeing of the people living inside? Our argument adds to how value is described. It does not replace it.

What a home influences. Our homes influence the air we breathe, our sleep, our comfort and our ability to rest and recover. That is why we assess buildings before renovation, inform design decisions with real measurements, and test again afterwards to understand whether we have genuinely made things better.

Where this is heading. Health will soon become as fundamental to good design as energy performance and sustainability. We say this with calm confidence rather than urgency, and we invite architects, builders and homeowners to join us.

The three problems we solve

Our marketing leads with three problems, with air quality, mould, EMFs and light behind them as the things we investigate. Full profiles and content frameworks are in the separate Content Playbook.

THE PROBLEM	WHO SHE IS
1. Allergies and environmental sensitivity Lead: Alfie	People whose symptoms seem worse at home, or who suspect something in their environment is affecting how they feel.
2. Agitation and the inability to relax at home	Feeling wired, unsettled or on edge, or sensing that something about the space feels off.
3. Sleep that is not satisfying	Not necessarily insomnia: sleeping, and still waking groggy or unrefreshed.

06 / 09 — VISUAL IDENTITY

Colour, typography, imagery

06

Colour palette

The palette is deliberately restrained. Deep forest grounds the brand, warm stone and sage soften it, and a single warm gold is reserved as an accent. Colour should feel drawn from a landscape, never from a screen.

PRIMARY

Forest Green #22372B
Logo, headlines, text on light grounds, deliberate dark moments.

Deep Forest #2D3D35
Body text, subheadings.

Cream #F8F6F2
Primary background for pages and stationery.

LIGHT GROUNDS

Linen #F1ECE6
Default slide background.

Blush #F7F0E8
Cover panels and soft highlights.

Ghost Stone #EEEBE5
Oversized section numerals and faint panels.

SECONDARY AND ACCENTS

Mid Sage #6E7C5B
Eyebrow labels, link text.

Soft Sage #A9B6A4
Dividers, subtle blocks.

Warm Stone #D6D1C4
Hairline rules, pale fills.

Warm Gold #C2A979
Emphasis words, fine rules, frames, one call to action.

Fern Green #35684F
Notes, labels and key data.

Terracotta #C9A18A
Occasional warmth in imagery, not type.

Warm Neutral #B8B2A7
Captions and metadata.

Backgrounds: light first

Our documents, guides and presentations all work the same way. The ground is light, warm and unhurried, and forest green is a deliberate moment of contrast, never the default. Pages filled edge to edge with green feel heavy, and they are not how Emerald Grey looks.

A rough guide to proportion across any document or presentation.

- **Light grounds carry the work:** at least two thirds of a presentation and nearly every page of a document.

- **Forest is the contrast moment:** one considered statement, a diagram that suits a darker field, or the closing page. Never long runs of dark slides.
- **Covers are never full-page green.** A cover is pale blush or cream with a photograph, and a forest band that carries the title.
- **Large areas of forest are framed or split** with a photograph or a fine gold hairline, so the colour reads as a panel and not a wall. A warm taupe drawn from a photograph may sit behind a single quotation slide.
- **Instagram uses the lighter end:** cream, soft sage, warm stone or warm white, with forest only as small type. Never pure white.

Using colour and gold

Forest green is the anchor and should appear in every piece. Cream is the default ground, with linen for slides. Gold is our single accent. Its signature use is italic emphasis on the one word or phrase in a forest heading that deserves the eye, such as “The Healthy *Bedroom* Checklist”, plus hairline rules, fine frames and the single call to action on a page. It is never a large fill or used for body copy. We avoid saturated colours, gradients and shadows, so the brand reads flat, matte and tactile.

Typography

The system is editorial: a classical serif for headings, a complementary serif for accents, Inter for body, and a script for the most personal moments.

Primary heading. Playfair Display

The bedroom is where the invisible matters most.

Used for headings on the website, in documents, guides and presentations, and for editorial text on Instagram. Always regular weight at a generous size, never bold. Free via Google Fonts.

Complementary serif. Cormorant Garamond

The grounded authority of a healthy home

A delicate serif for pull quotes and gold italic emphasis. Avoid bold and small sizes.

Body. Inter

A clean sans-serif chosen for warmth and readability. Regular and medium weights only, with generous line spacing. Client documents may use Inter or Arial.

Personal accent. Brittany Signature

With love, Iza

Reserved for personal and emotive moments: sign-offs on personal posts and for the closest relationships, personal captions, and the tagline in its warmest contexts. Never for functional or informational copy.

Instagram headings. Advercase

The primary typeface for Instagram headings, carousel covers, reel subtitles and bold statements, with Playfair Display for longer editorial text. It is not interchangeable with Playfair Display and does not appear in formal documents, website copy or client reports.

Typographic rules

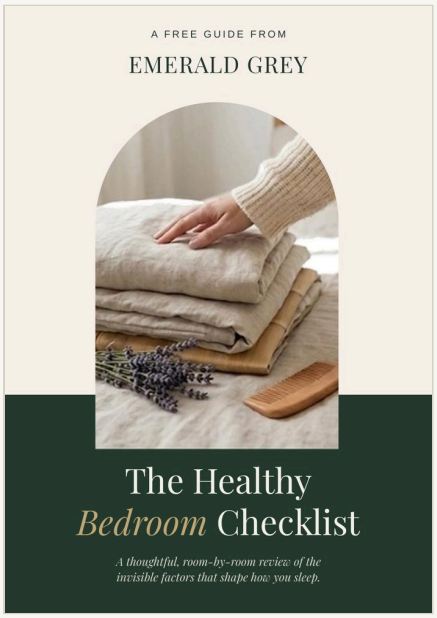

- Headlines are sentence case, in regular weight, and statement headlines end with a full stop. One word may be gold italic. No all-caps headlines.
- All-caps is for eyebrow labels, footers and subtitles only, always with widened spacing.
- Body copy is left-aligned with a ragged right edge, at 55 to 75 characters per line.

Layout language

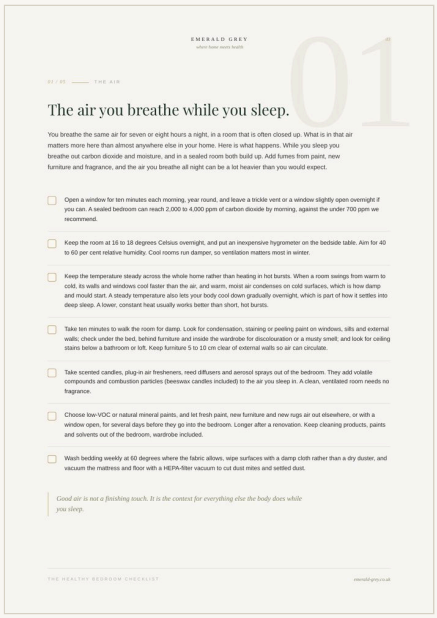

The guide, the checklist and the presentation share one light, editorial system of generous space, fine hairlines and one idea per page.

- **Frame.** A centred wordmark in small spaced capitals as the running header with the page number at top right, and a hairline footer carrying the document title and emerald-grey.co.uk.
- **Section openers.** A small eyebrow (“01 / 05”, a short gold dash, the topic in spaced capitals), a Playfair statement headline, and an oversized ghost numeral in Ghost Stone at top right, pale enough to read as texture.
- **Lists and checklists.** Fine hairlines between items, a small gold-outlined box leading each checklist item, and Fern Green numerals (01, 02, 03) in presentations.
- **Illustration.** Fine line drawings in forest or sage on light grounds, such as room sections and airflow paths, with a soft green glow where an invisible factor is shown. It explains and never decorates.
- **Covers and closing pages.** A pale blush or cream top with the wordmark and a photograph, and a forest band carrying the title in cream Playfair with one gold italic word. Slides are linen by default, dark pages sit inside a fine gold hairline, and a printed guide ends on a framed forest page with the wordmark alone, centred.

Recent work: reference examples

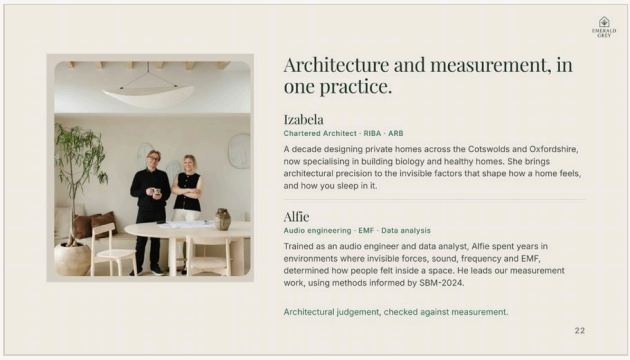

Guide cover
Blush top, photograph, forest band carrying the title.

Guide page
Eyebrow, ghost numeral, hairline checklist.

Instagram cover
Real photograph, white capitals, one gold italic word.

Linen slide
Photograph, Playfair headline, Fern Green labels.

Illustrated diagram
Line drawing with a soft green glow.

Logo

The wordmark is set in Cormorant Garamond, in forest green or cream, with the botanical house icon above, and an EG monogram where space is tight. Keep clear space equal to the height of the capital E, and use it no smaller than 24mm in print or 140 pixels on screen. Do not recolour, stretch, rotate or add effects, and do not place it on busy imagery.

Photography and imagery

Our visual world is warm, natural and unhurried: a real moment in someone's actual home, not a styled set, in natural light with the texture of real materials. We favour raw plaster, linen, wool, timber and handthrown ceramics, bedrooms with low warm light, and hands in real domestic moments. We avoid cold interiors, devices, stock wellness clichés and anything clinical.

07 / 09 SERVICES

What we offer, in three clear shapes

07

We work with clients in three ways, each suited to a different stage of their relationship with their home, and all resting on the principle that the invisible matters as much as the visible.

01 The Sleep Flow Programme

A four-week hybrid signature programme to restore your bedroom and solve the painful problem of sleep difficulties.

Our signature offering and the right starting point for most clients. A four-week online and coaching programme, led by Iza, that restores your bedroom as a space that supports sleep. Each week works on a different layer, with video lessons, a workbook and live coaching. Clients leave with a personalised Sleep Blueprint. It suits clients who want meaningful change without a full in-person assessment.

02 Home Health Analysis

A detailed in-home visit with testing and analysis, led by Alfie and supported by Iza.

An in-person assessment focused on the bedrooms and the rooms where your family spends its unbroken hours. Alfie leads the measurement of electromagnetic fields, dirty electricity, static fields, air quality and light. Iza reads the architecture and materials of the house and how it is lived in. You receive a written report with prioritised recommendations in language you can use, and a guided call to walk through it. The main call to action is to book a call, with a direct booking link, as most people want to speak to us first. It suits clients with a specific concern or who want the full picture.

03 Build and Renovation Consultancy

One-to-one consultancy for clients building a new home or renovating an existing one.

For homeowners planning a build or significant renovation, and for architects and builders who want a healthy home specialist on the team. We review plans, site conditions and material specifications through a building biology lens, so health is designed in rather than retrofitted. The sequence is simple: assess the building before renovation, inform design with real measurements, then test again afterwards.

How we talk about pricing

Prices are presented calmly, never beside discount language or urgency prompts. We set out who each offer is for, what is included, how it works, the cost and the next step, with local and non-local versions where relevant. A ready-to-go, low-ticket starter offer, such as a getting-started guide with a short video, is under consideration for people not yet ready for the programme.

Where we show up, and how

08

Website: emerald-grey.co.uk

The website is the brand's most considered surface, where someone who has been following us for weeks arrives to decide whether to enquire. It should feel like walking into a beautifully kept home: unhurried, warm, intelligent, confidently understated, with real photography from homes we have worked on where permission allows. The title and meta description lead with building biology and sleep, and we use the word consultancy in preference to assessment to signal the premium positioning.

Homepage and sales pages. Sell the sleep, not the bed or the test. The homepage keeps each section short, speaks directly to the symptoms people live with, and brings our story forward, with the About page expanding it. Every sales page opens with a headline that names the problem it solves, then what she is experiencing and wants to feel differently, then the offer and how it works. Include a “This is for you if…” section, make the practical details easy to find (who it is for, what is included, time commitment, cost, next step), and add an FAQ. For the Home Health Analysis, explain what happens afterwards and how the prioritised action plan shows what to address first.

Instagram

Instagram is our primary channel for discovery. The feed is a curated journal rather than a content stream, posted three times a week at the times our audience is most likely to be reading. The grid rotates three registers, and what holds them together is restraint: nothing busy, crowded or over-designed.

- **Atmospheric interiors.** Real homes with natural light and muted earthy tones.
- **Personal and place-led.** Iza, everyday moments and the natural world, which bring warmth and build trust.
- **Typographic posts.** A cream, warm white or soft neutral ground with bold, direct text in Advercase.

Lean into our own story. Share what we experienced, what we wish we had known and why we started Emerald Grey. Use Stories for behind the scenes of the two of us and our work, and balance education with relatable situations and clear invitations to work with us.

Carousels are editorial and image-led, not graphic-design-heavy. Real interior photography does the visual work, with text placed directly over the image, a cover headline of five to eight words, sparse inner slides, and colour drawn from the photograph. The aim is a page from a premium interiors publication, not a social media graphic.

Photo-led covers fill the frame with a real photograph. The headline is in white Advercase capitals over two lines, left aligned in the upper third, with one word in gold italic and a short subtitle in spaced capitals. Keep text clear of faces.

Captions are conversational and never salesy: a strong opening line, a short real observation, a clear takeaway and one clear invitation, with hashtags in the first comment. Personal posts close with “With love, Iza”. Reel subtitles are concise, in Advercase, and replies and DMs are brief and warm.

Content strategy for social and free content

What we share and what we hold back. Free content gives enough to earn trust, create recognition and open a door. It names the category of the problem, points in the right direction and offers one genuinely useful first step. The thresholds, measurement methods and room-by-room recommendations belong to the people who have worked with us, in the Sleep Flow Programme and the in-home analysis. A good free email makes her feel *finally, someone understands.* A good programme makes her feel *finally, I understand everything.*

The bold statement. A slide headline is an observation, not a command or a claim, such as "The room where you rest shapes whether you actually do."

The carousel arc. The cover names the experience and stops the scroll. Slides two and three validate what she is living with, with no solutions yet. Slides four to six introduce the environmental explanation one layer at a time, one idea per slide. Slides seven and eight offer the smallest, lowest-cost thing she can do today. The final slide is a soft invitation, never a hard sell.

Translating research. Social content does not need citations, but it must not overstate the evidence, and a claim that cannot be traced to a named source is not made. Name the felt experience first, then introduce the science as the explanation. One topic per piece.

The comment prompt. The keyword (SLEEP, QUIZ) may be in capitals, and the surrounding text stays calm. Urgency language, stacked benefits and social-proof counters never belong in our content.

LinkedIn

LinkedIn is where we build credibility with architects, interior designers and health practitioners. The tone is a little more technical and credential-forward, and the voice principles stay unchanged. It is the natural home for the leading thought that health is one of the most valuable assets a building can protect (Section 05).

Email

Our newsletter is a monthly dispatch signed from Iza or Alfie, and Section 04 sets out the email voice.

The quiz follow-up flow. People who finish the quiz are at their most receptive, so we send three short emails in quick succession: straight after the quiz, one day later and one day after that. Each has one main message and one clear action.

- **Email 1, your results and why we do this.** Deliver the personalised results, explaining in plain English what the scores mean, including whether higher or lower is better, and connect them to what prompted her to take the quiz. Open with what she recognises (waking in the night, feeling tired in the morning, struggling to switch off), share a short version of our Oxford story, give one practical tip that is clearly a starting point rather than personalised support, and introduce how she can work with us.
- **Email 2, what this could look like for you.** A relatable client story and a genuine testimonial: what she was struggling with, what we helped her change and what she reported afterwards. A clear call to action.
- **Email 3, your next step.** Explain the relevant service, answer the questions that might stop her enquiring, and invite her to book a call or join the programme. We do not add a closing "no pressure, whenever you are ready" email.

09 / 09 — QUICK REFERENCE

Quick reference

09

The rules that are easiest to slip on under pressure. Keep this page close when drafting.

Always

- Write in British English, with short paragraphs and a natural rhythm.
- Lead with real experience and the symptoms she recognises, in her own words, and sell the sleep, not the bed.
- Acknowledge scepticism, explain mechanism, and match the strength of language to the evidence.
- Use soft modal verbs (may, can, often, tends to).
- Check science against SBM-2024 or other named standards. If a claim cannot be traced to a source, do not make it.
- In email, open with *Hi [first name],* and close with *Best wishes, Iza*.
- Keep backgrounds light, with forest green as a deliberate contrast. Use real imagery, or none.

Avoid

- Em dashes and emojis.
- Alarmist language (dangerous, toxic, critical, urgent) and the language of optimisation (hack, stack, protocol).
- The words “quiet”, “quietly” and “gently”, abstract or poetic filler, “proves” and “guarantees”, and any “you must” command.
- “It is not you, it is your room”, or any variation of it, and any language that implies the reader has failed.
- Wellness clichés such as glow up, your best self and game changer.
- Comparative boasts, percentages and testimonial counts in headlines.
- Deep forest green as a full-bleed background.

Before publishing, check

- Is there a specific person with a specific problem, and have we named what it costs her?
- Does it move from empathy to explanation to a way forward, without compressing the full curriculum?
- Does it sound like Iza in a letter, not like a content creator?
- Does the reader leave calmer and clearer than when she arrived?

> *“If the reader feels calmer, clearer and supported after reading, the brand has done its job.”*
